BUSINESS INSIGHTS

Key Business Insights

1. APAC is the leading market by a wide margin. APAC generates \$3.59M in sales more than the US (\$2.30M) or EMEA (\$806K) making it the single most important market for the business.
2. Sales have nearly doubled over four years. Revenue grew from \$2.26M (2011) to \$4.30M (2014), a 90% increase, showing sustained business growth rather than a one-off spike.
3. Technology is the most profitable category by far. Technology delivers \$663,740 in profit more than Office Supplies (\$518,443) or Furniture (\$285,244) despite Furniture generating comparable sales (\$4.1M vs Technology's \$4.7M). Profit is concentrated in Technology, not just sales volume.
4. Tables is the only loss-making sub-category. Every other sub-category is profitable (Copiers +\$258.6K, Phones +\$216.7K), but Tables alone posts a net -\$64.1K loss — a specific, fixable problem inside an otherwise healthy Furniture category.
5. The Consumer segment drives most of the business. Consumer accounts for \$6.5M of the \$12.64M total sales (about 51%) and \$749K of total profit more than Corporate and Home Office combined.

Business Opportunities

1. Double down on Technology. Since Technology delivers the best profit-to-sales ratio of any category, expanding its range or promoting it more aggressively in underperforming regions could lift overall margin faster than growing Furniture or Office Supplies.
2. Replicate the APAC growth model elsewhere. Whatever is driving APAC's outsized performance is a template worth testing in EMEA and LATAM, the two weakest markets (\$806K and \$2.16M respectively).
3. Deepen the Consumer segment relationship. Since Consumer already drives half of all sales, targeted loyalty or bundling programmes aimed at this segment likely offer a better return than campaigns split evenly across all three segments.

Business Risks

1. Regional revenue concentration. With Central region alone contributing \$2.8M in sales, and APAC leading all markets, the business has no comparable second pillar of revenue if conditions shift in these top-performing areas.
2. A structurally unprofitable product line. Tables has been losing money consistently enough to show a net -\$64.1K, quietly eroding overall Furniture profitability every reporting period if left unaddressed.
3. Shipping cost/mode imbalance. With roughly 60% of orders on Standard Class shipping and far fewer on faster tiers, there is limited visibility into whether slower shipping is suppressing customer satisfaction or repeat purchases across a 147-country operation.
